DETAILED ACTION

Election/Restrictions

The examiner is withdrawing the previous restriction mailed out on 1/12/06 as being improper because it was not done under PCT Rule 13.1. A new restriction below under PCT Rule 13.1 is presented below.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

I. Figs. 1-20 [first embodiment]

II. Figs. 21-30 [second embodiment]

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims

are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 1-3, 5 9, 11, 12, 14, 15, 17, and 18 are readable on figures 1-20 the replacement of program entries in a simulcast range with a known start date and time.

Claims 4, 6-8, 10, 13, 16, and 19-42 relate to figures 21-30 generating single event information for a simulcast range and a technique for registering undetermined simulcast range or registering a simulcast range in the program broadcasting schedule of a simulcast original channel with its data and time to start broadcasting undetermined.

The following claim(s) are generic: Currently, no claims are considered generic.

1. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Species I requires the replacement of date and time for a simulcast range to be determined.

Species II does not require date and time for a simulcast generates single event information for a simulcast range so the start date and time do not have to be known ahead of time.

A telephone call was made to Morris Liss on 6/12/06 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions

unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
